

Figure 1 is a line plot showing the performance of various models on the absolute targets task. The x-axis represents the number of instances (1, 1.2, 1.4, 1.6, 1.8, 2.0) and the y-axis represents the performance metric. The plot shows that the performance of the models generally increases with the number of instances. The '15 instances' model (black line with circles) shows the highest performance, followed by the '1.2.1' model (orange line with diamonds). Other models (green, blue, yellow, cyan, magenta) show lower performance and are marked with 'X' at the 1.2, 1.4, and 1.6 instance points.
